

Architectural Concerns

The architectural concerns of the system are listed in the table below for the brownfield system.

ID	Concern
CRN-1	The initial structure of the system will determine the usability of the system
CRN-2	The background knowledge of the team is essential in determining whether the system can be built or not. SQL knowledge is necessary, and python is necessary in implementing the views for the statistical analysis function
CRN-3	A proper framework for the architecture of the system must be selected
CRN-4	Assign members to efficient places of development
